

## Cosmetology Complete Care

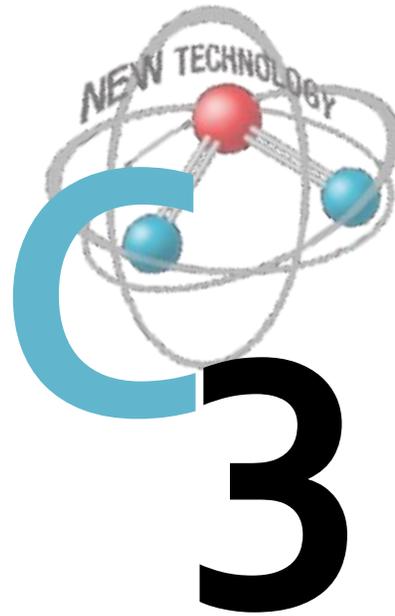

Bactronix saw the need in the beauty industry to develop a safer disinfectant for the artist and guest. Our goal is to promote environmental health, safety and wellness throughout the cosmetology industry. Cross-contamination and the spread of dangerous microorganisms can occur in a profession where you have close contact with other people. General surface areas and professional tools are large contributors to the spread of germs. In order to protect you and your guest, Bactronix has developed a high performance, environmentally friendly, disinfecting technology.

**Cosmetology Complete Care** is an EPA registered, hospital grade bactericidal, virucidal, fungicidal, disinfectant that is safe for people, plants, pets and the environment. **C3** is environmentally friendly and does not contain dangerous poisons such as bleach, hydrogen peroxide or alcohol. Such chemicals can be hazardous for Cosmetologists to work with. C3 has revolutionized the industry!

With continued use **C3** provides long lasting disinfection for the individual or professional beauty consultant. **C3** is the new eco friendly standard for providing health and safety to the cosmetology industry while meeting the highest of state infection control standards.

*"Make the environmentally friendly switch today. The world is always changing, we have to change with it and make a difference!"*

## WHERE TO USE C3

### Surfaces

Before setting up for any service, remove any dirt and debris, then spray 2-3 mists of **C3** with an even saturation depending on the size of your area, and let air dry. Once dry, lay down a paper towel and begin to set up all tools. Great for disinfection on surfaces, stations, countertops and chairs.

### Tools

After each service, remove any debris or soil with warm water and mild soap. Following routine cleaning, spray each tool with **C3 and let air dry**. Ensure thorough coverage, no rinse required. **C3** is environmentally friendly and is safe to use on hair dresser, makeup artist or barber shop tools. **\*Anything stainless steel should always be dried thoroughly! Optional: You can submerge tools in C3 and let air dry. Change daily for optimal efficiency.**

### Airbrushes

After use, pour a small amount of **C3** into the funnel of the airbrush gun and run for 30 seconds. This will disinfect and clean out any residual debris from the airbrush, providing safety and maintaining optimum performance.

### Disinfection Best Practices

**C3** kills 99.9% of germs in 60 seconds! Using a spray and go application, target high touch points in your salon or on site to help aid in controlling cross-contamination. Door knobs, light switches, sink areas, facial areas, manicure areas, front desk and more!  
Disinfectants are rated for hard non-porous surfaces, always refer to the **C3** label for directions and usage.
